

## **LMC meeting Sunday April 13, 2008**

1. The pressing issue is the dam spillway and the erosion that is creating a ravine that is moving quickly towards Tallavana Trail. Heavy rains have exacerbated this problem and Neil is working on resolving it ASAP. Trees have been removed and land leveled behind the spillway. This cleared area will most likely be layered with an interlocking block in an effort to stabilize the ground directly behind the spillway. No permits are required due to the severity of the impending problem. We are looking for riprap or any kind of acceptable rubble to help eliminate the costs of filling the ravine. We are waiting for NFWM to approve our repair procedure.
2. We are looking for matching funds for our grants. Diane was going to ask Sean about any grants or monies spent by the nurseries and or any other surrounding entities to improve water quality. We are also going to contact Gadsden County and Reston to inquire about paving, cleaning ditches, and any other construction or maintenance that has been done to control erosion or improve water quality.
3. Diane, Tom, Tallavana's attorney and board members are going to meet with Lambert regarding his farm and the runoff created by his operation. This in an effort to alleviate the problems with the D-8 pond and the sediment building in the D-8 cove. We were wondering if his issues have been associated with the Lake Talquin basin.
4. BMP for the Lake Tallavana residents regarding our septic systems was further discussed. The LMC believes this is an issue we will have to address to control the hypereutrophic condition of the lake and to justify our grant monies.
